Árboles de decisión.

Datasets con pocos atributos! Pero pueden tener fronteras de clasificación complejas

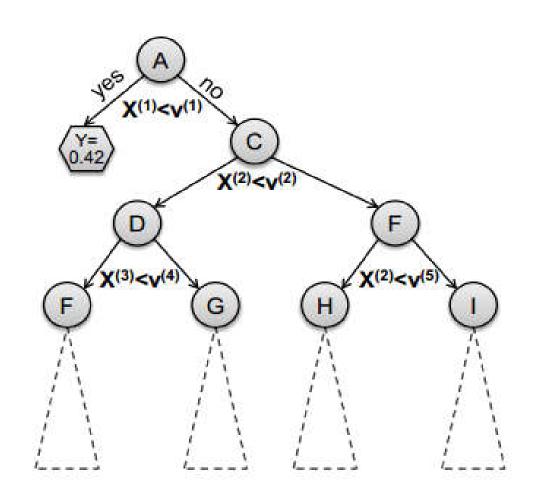

Tipos:

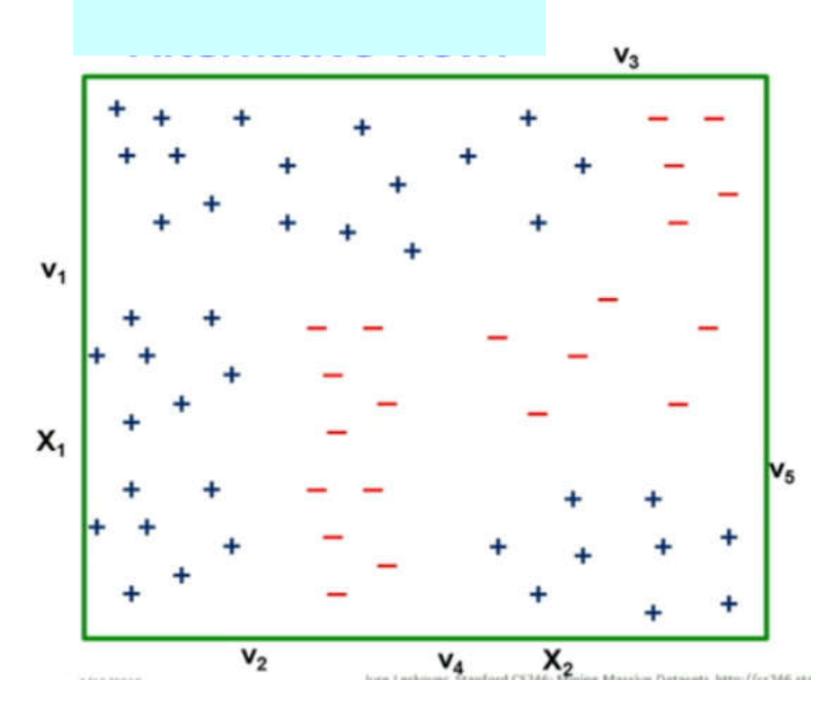

- Regresión
- Clasificación

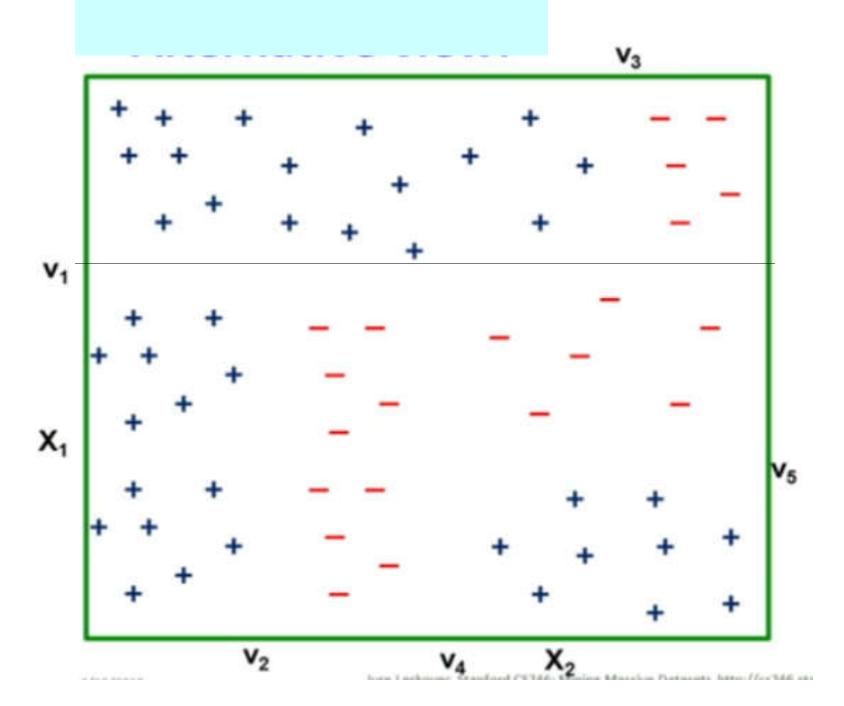

Composición:

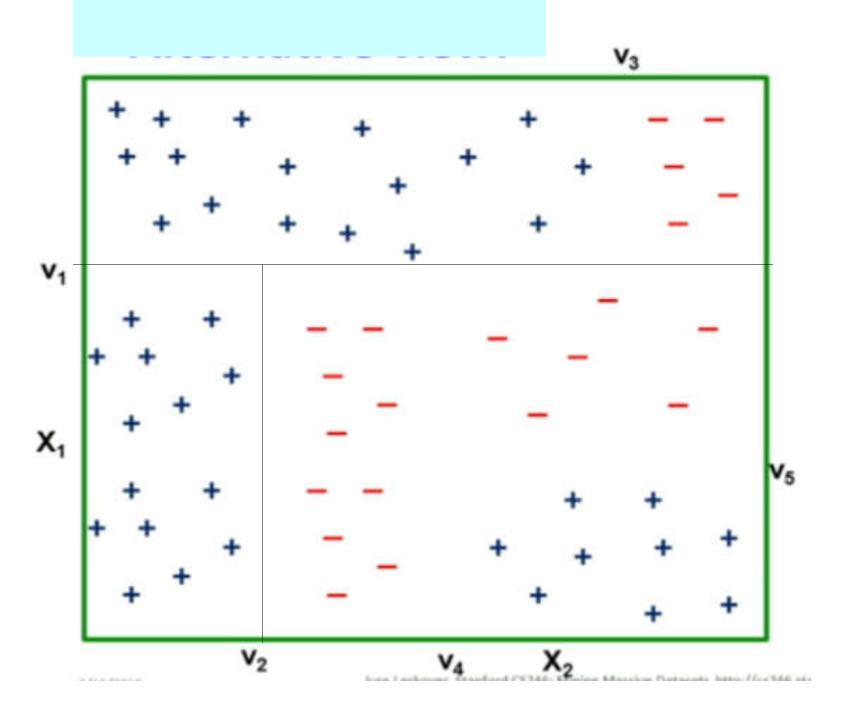

•Nodos: bifurcación

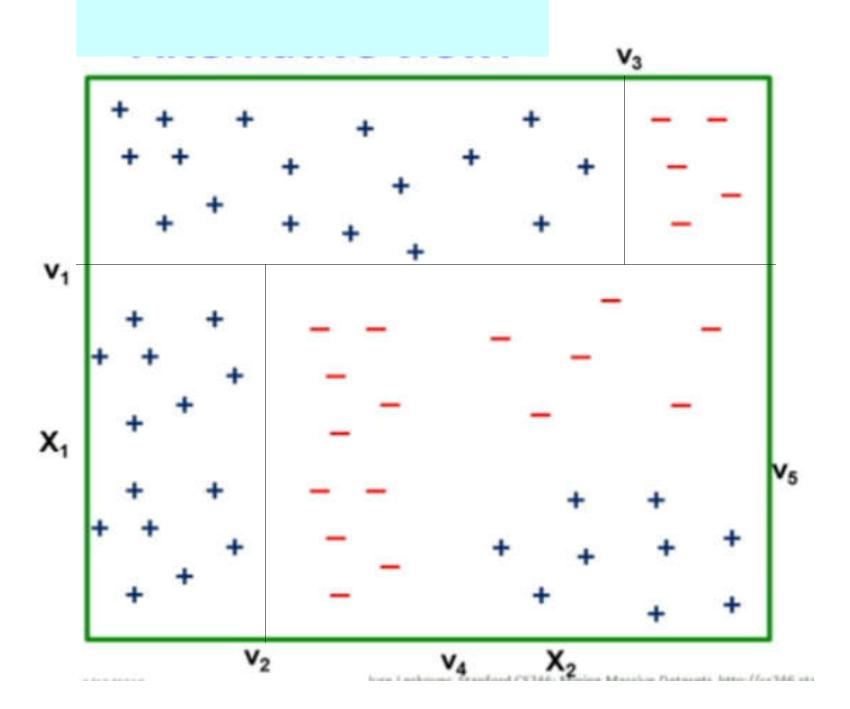

Hojas: final (<u>predicción</u>)

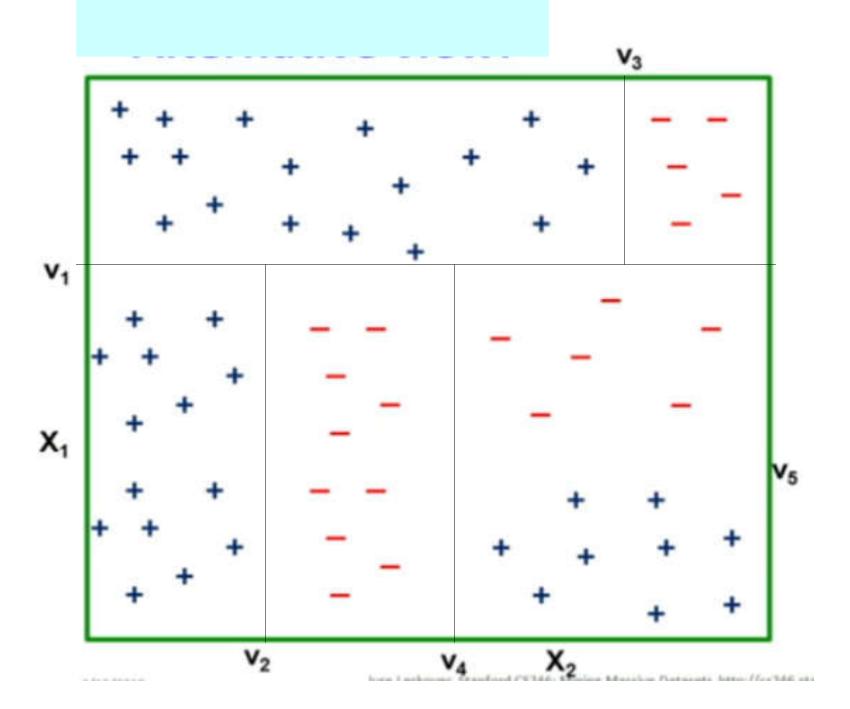

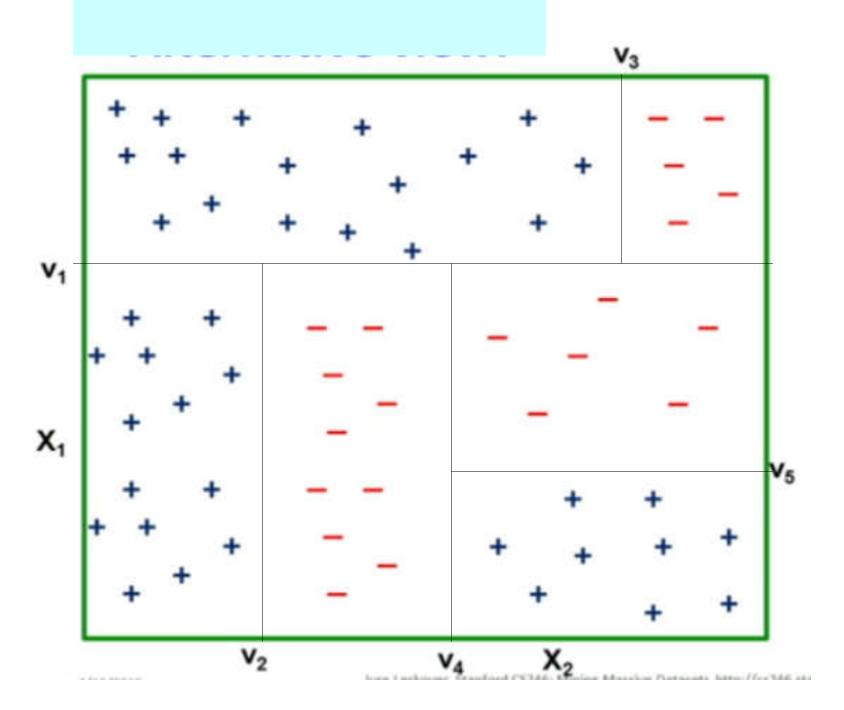

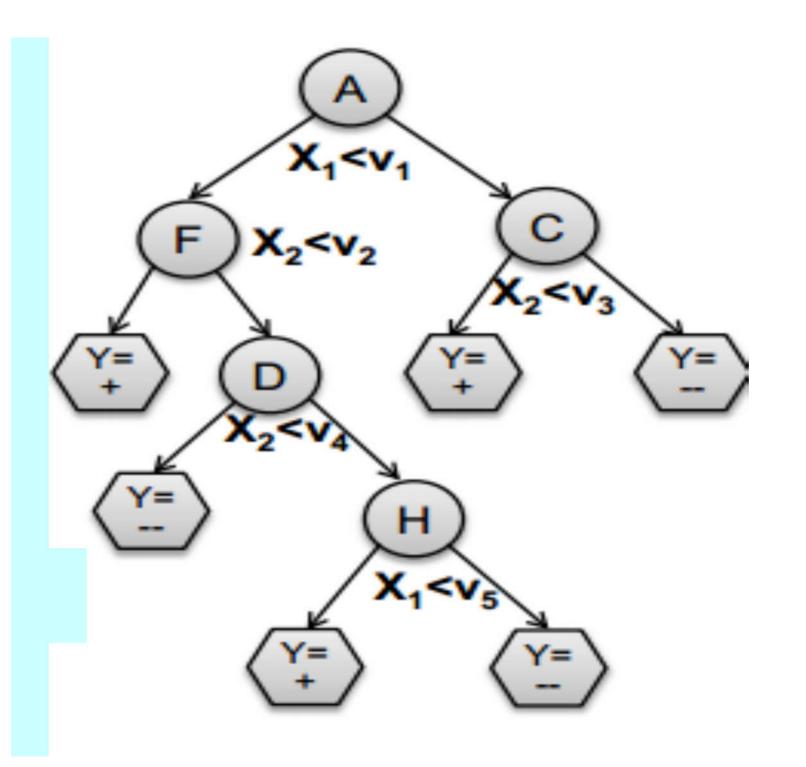

Criterios de parada:

- •Pureza: La varianza de los elementos de la hoja es menor que un umbral de varianza fijado-
- •<u>Número de elementos</u> por debajo de cierta cantidad determinada (evitar overfitting).

Criterios de predición:

Regression:

- Predict average y_i of the examples in the leaf
- Build a linear regression model on the examples in the leaf

Classification:

Predict most common y_i of the examples in the leaf
